Quality and Environmental policy

Sifvert Skruv offer products and services in mechanical fastening. Our delivery is characterized by high competence, personal service and tailored solutions. Our customer commitment ensures efficient logistics and handling of fasteners. We fulfill our commitment by:

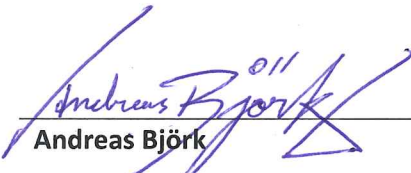

- High precision from the start of each task, this ensures that we are effective and productive in our commitments
- Delivering true quality in every step of the way. We know that our efforts in our internal processes reflect in the delivery to our customers
- Continuously improve our competence and create dedication amongst co-workers and leaders
- Continually improve the quality management system. Our efforts to improve our processes shall originate from our customer needs and requirements.

Sifvert Skruv acts to minimize our negative environmental impact. Our products are many times a good choice from an environmental perspective because of their long lifespan and high recyclability. Our corporation has a direct impact on the environment through our transports, our use of energy and the resources we deplete. We minimize our negative impact on the environment by:

- Cooperating with suppliers who express an environmental commitment
- Sorting and recycling of our waste
- Minimizing CO₂ emissions from our transports
- Actively working to improve our environmental efforts and to make information and knowledge thereof accessible within our organization.

Sifvert Skruv commits to comply with applicable requirements. This policy is fundamental to our quality and environmental management system.
